Picasso most popular photo editor & the best image viewer. Picasso is the best software to edit photos and colleges. You can also make sliders of photos in this software and enjoy. Picasso is developed by Google and it's free and easy to use due to its best programming and features. From January 2015, the latest version of Picasso is 3.9, which supports Windows XP, Windows Vista, and Windows 7, and has Google+ integration for users of that service.[8] Version 3.9 also removed integration with Picasa Web Albums for users of Google+. Picasso 3 Free Download For Windows 7 enables you to transfer, find, organize, edit, print, and share images, all with this easy-to-use product. Besides, using Picasso, you can detect your USB driver and imports pictures into albums. Editing tools include cropping (standard or custom), removal of red-eye, and enhancing-even switching from color to black and white. Furthermore, you can also make instant backups to CD (or to other hard drives) of your photo collections, organize your photos using labels and stars (just like with Gmail), write captions for all pictures, and organize videos as well as pictures. Besides selecting a source and a destination folder, you can also tick an option to automatically exclude duplicates, or you can exclude any image manually. There are many things you can do with the imported pictures. A series of options are available for each group of images. They can be used to play an album like a slideshow, in full-screen mode, to create a photo collage or a movie presentation or to share the selected images, or synchronize them with a web album. Picasso supports all popular image formats such as JPEG, GIF, BMP, PSD, and movie files and is compatible with most digital cameras. Picasso for windows 7 is basically compatible with all other photo-sharing products and digital cameras. If you want to share your images then you can share your images with your friends by e-mailing them or posting them to your own blog. It is also possible to print them or burn them to a CD. With this function, you can ask the application to scan your photo library so as to recognize a specific face and extract it. Technical Data Of Picasso Software Name: Picasso Developer: Google Operating System: Microsoft Windows Vista, Windows 7, 8, & 10. RAM Required: 2GB Language: US English I hope you will easily get Picasso 3 free download for windows 7 from our website and also come again on our site to download more PC Software . YouTube Kids Download Google LLC Google Chrome: Fast & Secure Google LLC Obsolete image organizer and image viewer by Google Picasa/Picasa version 3.9.137.141 on Windows 8.1 Original author's/Lifescape, Inc./Developer's/Lifescape (Google) Initial release/October 15, 2002, 19 years ago (2002-10-15)[1] Final release Windows:3.9.141.259 (9 October 2015; 6 years ago (2015-10-09)) [±][2] Mac:3.9.141.306 (9 October 2015; 6 years ago (2015-10-09)) [±][2] Operating system/Windows, OS X, LG Smart TV/Type/Image organizer, image viewer/License/Freeware/Website/picasa.google.com Picasso was a cross-platform image organizer and image viewer for organizing and editing digital photos, integrated with a now defunct photo-sharing website, originally created by a company named Lifescape[3] (which at that time was incubated by Idealab) in 2002.[4] "Picasa" is a blend of the name of Spanish painter Pablo Picasso, the phrase mi casa (Spanish for "my house") and "pic" for pictures.[4][5] Native applications for Windows XP, Windows Vista, Windows 7, and macOS were available, and for Linux, the Windows version was bundled with Wine compatibility layer. An iPhoto plugin and a standalone program for uploading photos were available for Mac OS X 10.4 and later. In July 2004, Google acquired Picasso from Lifescape and began offering it as freeware.[4] On February 12, 2016, Google announced it was discontinuing support for Picasso Desktop and Picasa Web Albums, effective March 15, 2016, and focusing on the cloud-based Google Photos as its successor.[6] Picasso Web Albums, a companion service, was closed on May 1, 2016.[7] Version history Windows As of January 2015[update], the latest version of Picasso is 3.9, which supports Windows XP, Windows Vista, and Windows 7, and has Google+ integration for users of that service.[8] Version 3.9 also removed integration with Picasa Web Albums for users of Google+.[9] Linux KDE Image Plugin Interface (KIPI) export to Picasaweb Since June 2006, Linux versions have become available as free downloads for most distributions of the Linux operating system. It is not a native Linux program but an adapted Windows version that uses the Wine libraries.[10] Google has announced that there will be no Linux version for 3.5.[11] Currently, Google has only officially offered Picasso 3.0 Beta for Linux. On April 20, 2012, Google announced that they were deprecating Picasso for Linux and will no longer maintain it for Linux.[12] To use latest version of Picasso on Linux, Linux users can use Wine and install Picasso for Windows.[13] Linux users can use other programs to upload to Picasa Web Albums, including Shotwell and Digikam.[14] Mac OS X On January 5, 2009, Google released a beta version of Picasso for Mac (Intel-based Macs only).[15] Also, a plugin is available for iPhoto to upload to the Picasa Web Albums hosting service. There is also a standalone Picasso Web Albums uploading tools for OS X 10.4 or later.[16] The Picasso for Mac is a Google Labs release. Features This section needs additional citations for verification. Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed. (August 2009) (Learn how and when to remove this template message) Organization and editing For organizing photos, Picasso has file importing and tracking features, as well as tags, facial recognition, and collections for further sorting. It also offers several basic photo editing functions, including color enhancement, red eye reduction, and cropping. Other features include slide shows, printing, and image timelines. Images can also be prepared for external use, such as for e-mailing or printing, by reducing file size and setting up page layouts. There is also integration with online photo printing services. Other simple editing features include adding text to the image. Picasso supports Google's WebP image format as well as the JPG format and most Raw image format (RAW files). A user can view and edit RAW files and save the finished edit (as JPG, or other forms) without any changes to the original RAW file. Keywords Picasso uses picasa.ini files to keep track of keywords for each image. In addition to this, Picasso attaches IPTC Information Interchange Model (IPTC) keyword data to JPEG files, but not to any other file format. Keywords attached to JPEG files in Picasso can be read by other image library software like Adobe Photoshop Album, Adobe Bridge, Adobe Photoshop Lightroom, digiKam, Aperture, and iPhoto. According to the Picasso Readme, Picasso can parse Extensible Metadata Platform (XMP) data. However, it cannot search local files for existing XMP keywords (clarification needed) Searching Picasso has a search bar that is always visible when viewing the library. Searches are live, so that displayed items are filtered as one types. The search bar will search filenames, captions, tags, folder names, and other metadata.[17] Picasso also has an experimental feature that allows searching for images that contain certain colors with the "color" operator.[18] Viewing Picasso has no separate view window. There is only an "edit view" with a viewing area. Fullscreen view is available in slideshow mode, by holding down the ctrl+alt keys while in "edit view", or by pressing the Alt Gr key. This feature is also available through the context menu of Windows Explorer, and provides a way to start the Picasso editor as well. Backup In Picasso 2 and earlier versions, changes to pictures made in Picasso overwrite the original file, but a backup version of the original is saved in a hidden folder named "Originals" in the same folder as the original picture (picasaoriginals on Mac OS X). In Picasso 3, changes to pictures made in Picasso are saved to a hidden file picasa.ini in the same folder as the original picture. This allows multiple edits to be performed without altering the original image. Viewing the picture in Picasso or using the Picasso Photo Viewer will apply modifications on the fly, whereas viewing through other programs (such as Windows XP's Photo and Fax Viewer) will display the original image. Changes can also be made permanent when the "Save" function, where the original file is backed up in a hidden folder .picasaoriginals located in the same folder as the original picture and the modified version is written in its place. Face recognition On August 15, 2006, Google announced it had acquired Neven Vision, whose technology can be used to search for features within photos such as people or buildings. Google applied this technology for face recognition, and this functionality was launched on Picasa Web Albums on September 2, 2008.[19] Neven Vision incorporates several patents[20] specifically centered around face recognition from digital photo and video images. Geotagging Since June 2007, Picasso can write geographic coordinates to Exif metadata, thus geotagging an image.[citation needed] Since version 3.5 of Picasso, geotagging may be done directly inside Picasso, in the Places panel.[21] The geotagging functionality is described in the Picasso User's Guide.[22] Other Picasso applications Picasso Web Albums Main article: Picasa Web Albums Besides Google+, Picasso also integrated with Picasa Web Albums, an image hosting and sharing web service. The service allowed users with a Google account to store and share their photos on the service. Users with a Google+ account received unlimited storage for photos of a resolution less than 2048x2048 pixels; all others received unlimited storage for photos of a resolution less than 800x800. Hello Hello by Google's Picasso was a free computer program that enabled users to send images across the Internet and publish them to their blogs. It was similar to an instant messaging program because it allowed users to send text, but Hello focused on digital photographs.[23] Users could opt to view the same pictures as their friends in real-time. One of the advantages claimed at the website is that photos could be shared through firewalls. The service was canceled at the end of 2006, and users were instructed to try the Picasso "Blog This" functionality for uploading pictures to their blogs. According to the official website,[23] the Hello project was shut down on May 15, 2008. Discontinuation On February 12, 2016, Google announced that the Picasso desktop application would be discontinued on March 15, 2016, followed by the closure of the Picasa Web Albums service on May 1, 2016.[24] Google stated that the primary reason for retiring Picasso was that it wanted to focus its efforts "entirely on a single photos service" the cross-platform, web-based Google Photos. While support for the desktop version of Picasso is ending, Google has stated that users who have downloaded the software, or who choose to download it prior to the March 15th deadline will still be able to use its functionality, albeit with no support from Google.[25] See also Google Photos Comparison of image viewers Desktop organizer List of photo sharing websites References ^ "NEWS! - Lifescape's Picasa aims to be your digital "shoebox"".
